- Do not exit the software while you are using the third party tethering.

---

① The client can't connect to the CamFi?

If the client can't connect to the CamFi.

Connection:Disconnected

The CamFi may have bridged to the other Wi-Fi. You can check the CamFi IP via the CamFi App.

Download CamFi App

- Connect your computer(mobile phone) to the CamFi bridge Wi-Fi.
- Open the CamFi App.
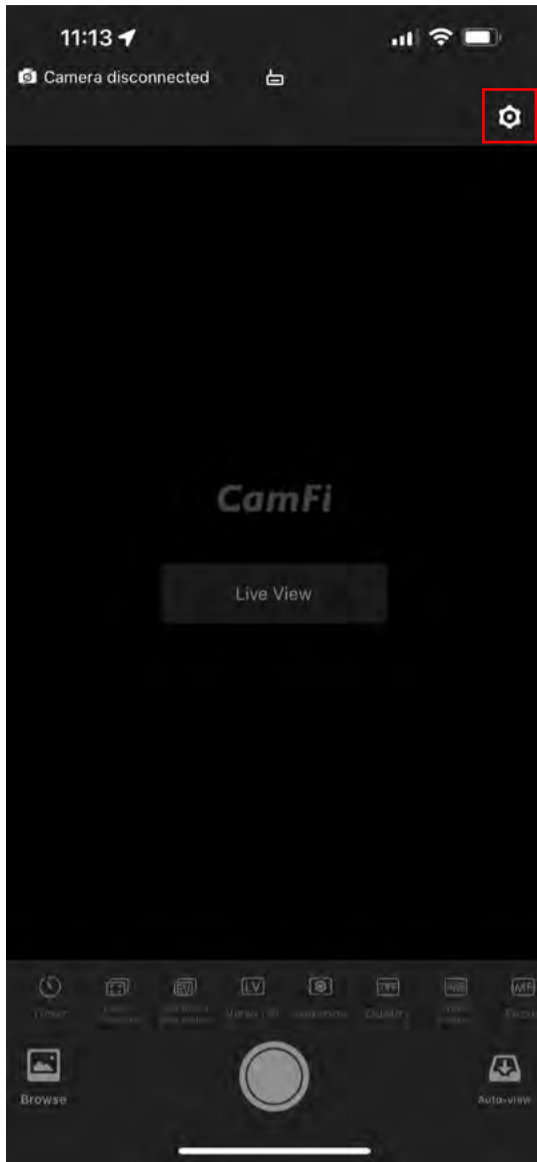

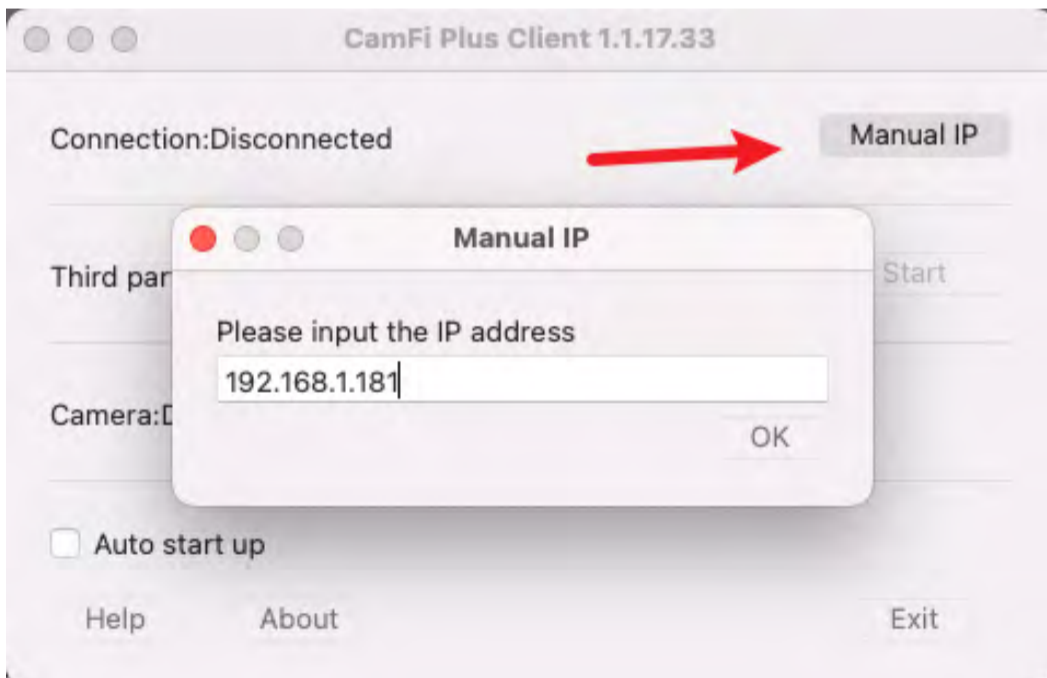

- You can check the CamFi IP.

On computer:

On mobile phone:

Or go to "settings" - "Connect to CamFi" - "info"

- Click the "Manual IP" on CamFi Plus Client.
- And input the CamFi IP.

Chapter 3: Using third party software

Attention:

- After opening the wireless tethering mode, you will be able to remotely control the camera using Capture One,Lightroom and original camera software. CamFi official software cannot be used after it is enabled.

- Except for the connection with the camera, other USB port cannot be used.

- If the SD card is plugged into the CamFi 3, you need to take out the SD card.

- Open the third party software, such as Capture One.

- Capture One will automatically connect to the camera, just as easily as using a USB cable.
